

Behavioral Data

There was a significant main effect of group whereby SZ were less accurate under the Execute instruction compared to CO ($F(1,30) = 6.7, p = .01$). There was also a significant main effect of stimulus type ($F(2,30) = 8.1, p = .0008$). Paired t-tests indicated greater accuracy with the Animated stimulus compared to both Symbolic ($t(31)=2.2, p=.04$) and Spatial ($t(31)=3.7, p=.0008$) stimuli. Finally, there was a significant group-by-condition interaction. Planned contrasts indicated no significant group difference in performance with the Animated stimulus ($F(1,60)=3.0, p=.055$), but patients were less accurate with the Symbolic ($F(1,60)=31.2, p<.0001$) and Spatial ($F(1,60)=36.5, p<.0001$) stimuli. Importantly, however, there was no significant main effect of group ($F(1,30) = 1.3, p = .26$), condition ($F(2,30) = 0.2, p = .81$), or group-by-condition interaction ($F(2,30) = 2.1, p=.13$) on the number of trials in which participants failed to complete a three-movement sequence before the end of the trial. Nor was there any main effect of group ($F(1,30) = 3.7, p = .07$), condition ($F(2,30)=.5, p=.59$), or group-by-condition interaction ($F(2,30) = 1.4, p = .26$) on accuracy under the Observe instruction. To summarize, although SZ were generally less accurate than CO, accuracy was still high. Further, putative group differences in activation under the Execute instruction cannot simply be explained by fewer finger movements in the patient group, nor can group differences in activation under the Observe instruction be due to patients not following task instructions and making key presses more frequently.

Response Times (RT)

For movement initiation latency under the Execute instruction, there was no significant main effect of group ($F(1,30) = 1.1, p = .31$) or stimulus type ($F(2,30) = .43, p = .65$). However, there was a significant group-by-stimulus interaction ($F(2,30) = .10.1, p = .0002$). Planned contrasts indicated longer latency to initiate the movement sequence in SZ with the Symbolic ($F(1,60)=10.9, p=.002$) and Spatial ($F(1,60)=32.0, p<.0001$) stimuli, but not the Animated ($F(1,60)=0.4, p=0.52$) stimulus.

For movement completion time under the Execute instruction, there was also no main effect of group ($F(1,30) = 1.4; p = .24$). However, there was a main effect of condition ($F(2,30) = 36.4; p < .0001$). Paired t-tests indicated slower completion for the Animated ($t(31)=5.1, p<.0001$) and Symbolic ($t(31)=9.1, p<.0001$) stimuli compared to the Spatial stimuli. Finally, there was a significant group-by-condition interaction ($F(2,60) = 4.1227; p = .02$). Planned contrasts indicated that SZ were actually faster than CO for the Animated ($F(1,60)=16.3, p<.0001$) and Symbolic ($F(1,60)=10.8, p=.002$) stimuli, but not for the Spatial stimulus ($F(1,60)=0.04, p=.84$).

TABLE S1. Accuracy and Reaction Times

	SZ (n=16)	CO (n=16)
Accuracy: % (s.d.)		
Execute		
Animated	94.75 (5.39)	96.79 (2.84)
Symbolic	90.76 (7.52)	97.05 (3.75)
Spatial	89.93 (8.70)	95.75 (3.08)
Observe		
Animated	98.35 (2.58)	99.78 (.55)
Symbolic	98.96 (2.28)	99.09 (2.40)
Spatial	97.66 (3.83)	99.48 (1.55)
Execute Incomplete: % (s.d.)		
Animated	3.12 (4.55)	2.52 (2.70)
Symbolic	3.60 (6.07)	1.65 (2.74)
Spatial	4.17 (6.17)	1.69 (2.22)
Reaction Time: sec. (s.d.)		
Initiation Latency		
Animated	.84 (.12)	.85 (.09)
Symbolic	.86 (.12)	.82 (.07)
Spatial	.87 (.15)	.79 (.08)
Completion Time		
Animated	2.76 (.08)	2.81 (.07)
Symbolic	2.78 (.07)	2.82 (.04)
Spatial	2.73 (.08)	2.74 (.07)

TABLE S2. Peak Talairach Coordinates of All Significant Group Activations

		Peak Talairach coordinates				max	max
		cluster	x	y	z	t-value	p-value
		size					
Imitate > Action Execution							
Control > Schizophrenia	Right inferior parietal lobule/posterior superior temporal sulcus	94	45	-40	22	4.54	0.00008
Control > Schizophrenia	Right precentral gyrus	10	54	-1	28	3.58	0.001
	Left middle occipital gyrus	15	-49	-70	4	3.2	0.003
Imitate > Baseline							
Control > Schizophrenia	Right middle temporal gyrus	15	55	-25	-8	3.69	0.0008
	Right precentral gyrus	11	54	-1	31	3.42	0.002
	Right posterior superior temporal sulcus	63	45	-43	19	4.24	0.0002
