Table S1: ENIGMA Obsessive-Compulsive Disorder Working Group Demographics, age, sex, and numbers breakdown for participating sites, separately for adult and pediatric samples.	Page 7
Table S2: ENIGMA Obsessive-Compulsive Disorder Working Group Clinical characteristics breakdown for participating sites, separately for adult and pediatric samples.	Page 9
Table S3: Image acquisition parameters per site.	Page 11
Table S4: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients compared with adult healthy controls, controlling for age, sex and scan center.	Page 13
Table S5: Full mega-analytic results for surface area of each structure for the adult OCD patients compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 15
Table S6: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 18
Table S7: Full mega-analytic results for surface area of each structure for the pediatric OCD patients compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 21
Table S8a: Full mega-analytic results for cortical thickness of each structure for the adult medicated OCD patients compared with adult healthy controls, controlling for age, sex and scan center.	Page 24
Table S8b: Full mega-analytic results for cortical thickness of each structure for the adult unmedicated OCD patients compared with adult healthy controls, controlling for age, sex and scan center.	Page 27
Table S8c: Full mega-analytic results for cortical thickness of each structure for the adult medicated OCD patients compared with adult unmedicated patients, controlling for age, sex and scan center.	Page 30
Table S9a: Full mega-analytic results for surface area of each structure for the adult medicated OCD patients compared with healthy adult controls, controlling for age, sex, scan center and ICV.	Page 33
Table S9b: Full mega-analytic results for surface area of each structure for the adult unmedicated OCD patients compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 36
Table S9c: Full mega-analytic results for surface area of each structure for the adult medicated OCD patients compared with adult unmedicated patients, controlling for age, sex, scan center and ICV.	Page 39

Table S10a: Full mega-analytic results for cortical thickness of each structure for the pediatric medicated OCD patients compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 42
Table S10b: Full mega-analytic results for cortical thickness of each structure for the pediatric unmedicated OCD patients compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 45
Table S10c: Full mega-analytic results for cortical thickness of each structure for the pediatric medicated OCD patients compared with pediatric unmedicated patients, controlling for age, sex and scan center.	Page 48
Table S11a: Full mega-analytic results for surface area of each structure for the pediatric medicated OCD patients compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 51
Table S11b: Full mega-analytic results for surface area of each structure for the pediatric unmedicated OCD patients compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 54
Table S11c: Full mega-analytic results for surface area of each structure for the pediatric medicated OCD patients compared with pediatric unmedicated patients, controlling for age, sex, scan center and ICV.	Page 57
Table S12a: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients with current comorbid depression compared with adult healthy controls, controlling for age, sex and scan center.	Page 60
Table S12b: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients with no current comorbid depression compared with adult healthy controls, controlling for age, sex and scan center.	Page 63
Table S12c: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients with current comorbid depression compared with adult patients without, controlling for age, sex and scan center.	Page 66
Table S13a: Full mega-analytic results for surface area of each structure for the adult OCD patients with current depression compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 69
Table S13b: Full mega-analytic results for surface area of each structure for the adult OCD patients with no current comorbid depression compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 72
Table S13c: Full mega-analytic results for surface area of each structure for the adult OCD patients with current comorbid depression compared with adult patients without, controlling for age, sex, scan center and ICV.	Page 75
Table S14a: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients with current comorbid depression compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 78
Table S14b: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients with no current comorbid depression compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 81
Table S14c: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients with current comorbid depression compared with pediatric patients without, controlling for age, sex and scan center.	Page 84
Table S15a: Full mega-analytic results for surface area of each structure for the pediatric OCD patients with current cormorbid depression compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 87
Table S15b: Full mega-analytic results for surface area of each structure for the pediatric OCD patients with no current cormorbid depression compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 90

Table S15c: Full mega-analytic results for surface area of each structure for the pediatric OCD patients with current comorbid depression compared with pediatric patients without, controlling for age, sex, scan center and ICV.	Page 93
Table S16a: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients with current comorbid anxiety compared with adult healthy controls, controlling for age, sex and scan center.	Page 96
Table S16b: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients with no current comorbid anxiety compared with adult healthy controls, controlling for age, sex and scan center.	Page 99
Table S16c: Full mega-analytic results for cortical thickness of each structure for the adult OCD patients with comorbid current anxiety compared with adult patients without, controlling for age, sex and scan center.	Page 102
Table S17a: Full mega-analytic results for surface area of each structure for the adult OCD patients with current comorbid anxiety compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 105
Table S17b: Full mega-analytic results for surface area of each structure for the adult OCD patients with no current comorbid anxiety compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 108
Table S17c: Full mega-analytic results for surface area of each structure for the adult OCD patients with current comorbid anxiety compared with adult patients without, controlling for age, sex, scan center and ICV.	Page 111
Table S18a: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients with current comorbid anxiety compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 114
Table S18b: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients with no current comorbid anxiety compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 117
Table S18c: Full mega-analytic results for cortical thickness of each structure for the pediatric OCD patients with current comorbid anxiety compared with pediatric patients without, controlling for age, sex and scan center.	Page 120
Table S19a: Full meta-analytic results for surface area of each structure for the pediatric OCD patients with current comorbid anxiety compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 123
Table S19b: Full mega-analytic results for surface area of each structure for the pediatric OCD patients with no current comorbid anxiety compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 126
Table S19c: Full mega-analytic results for surface area of each structure for the pediatric OCD patients with current comorbid anxiety compared with pediatric patients without, controlling for age, sex, scan center and ICV.	Page 129
Table S20: Full mega-analytic results for surface area of each structure for the pediatric OCD patients with ordering/symmetry symptoms compared with pediatric patients without, controlling for age, sex, scan center and ICV.	Page 132
Table S21a: Full mega-analytic results for cortical thickness of each structure for the adult onset OCD patients compared with adult healthy controls, controlling for age, sex and scan center.	Page 135
Table S21b: Full mega-analytic results for cortical thickness of each structure for the childhood onset OCD patients compared with adult healthy controls, controlling for age, sex and scan center.	Page 138
Table S21c: Full mega-analytic results for cortical thickness of each structure for the childhood onset OCD patients compared with adult onset patients, controlling for age, sex and scan center.	Page 141
Table S22a: Full mega-analytic results for surface area of each structure for the adult onset OCD patients compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 144

Table S22b: Full mega-analytic results for surface area of each structure for the childhood onset OCD patients compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 147
Table S22c: Full mega-analytic results for surface area of each structure for the childhood onset OCD patients compared with adult onset patients, controlling for age, sex, scan center and ICV.	Page 150
Table S23a: Full mega-analytic results for cortical thickness of each structure for the age of onset regression analysis in adult OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 153
Table S23b: Full mega-analytic results for surface area of each structure for the age of onset regression analysis in adult OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 156
Table S24a: Full mega-analytic results for the cortical thickness of each structure for the age of onset regression analysis in pediatric OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 159
Table S24b: Full mega-analytic results for the surface area of each structure for the age of onset regression analysis in pediatric OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 162
Table S25a: Full mega-analytic results for the association between illness duration and the cortical thickness of each structure in adult OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 165
Table S25b: Full mega-analytic results for the association between illness duration and the surface area of each structure in adult OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 168
Table S26a: Full mega-analytic results for the association between illness duration and the cortical thickness of each structure in pediatric OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 171
Table S26b: Full mega-analytic results for the association between illness duration and the surface area of each structure in pediatric OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 174
Table S27a: Full mega-analytic results for the association between illness severity and the cortical thickness of each structure in adult OCD patients based on the YBOCS, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 177
Table S27b: Full mega-analytic results for the association between illness severity and the surface area of each structure in adult OCD patients based on the YBOCS, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 180
Table S28a: Full mega-analytic results for the association between illness severity and the cortical thickness of each structure in pediatric OCD patients based on the CYBOCS, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 183
Table S28b: Full mega-analytic results for the association between illness severity and the surface area of each structure in pediatric OCD patients based on the CYBOCS, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 186
Table S29a: Overview of the effect sizes of the significant results ($q < 0.05$) detected by the adult meta-analysis on cortical thickness controlled for age, sex and scan center.	Page 189
Table S29b: Overview of the effect sizes of significant results ($q < 0.05$) detected by the adult meta-analysis on surface area controlled for age, sex, scan center and ICV.	Page 192
Table S30a: Full meta-analytic results for cortical thickness of each structure for the adult OCD patients compared with adult healthy controls, controlling for age, sex and scan center.	Page 195
Table S30b: Full meta-analytic results for cortical surface area of each structure for the adult OCD patients compared with adult healthy controls, controlling for age, sex, scan center and ICV.	Page 198

Table S31: Overview of the effect sizes of significant results ($q<0.05$) detected by the pediatric meta-analysis on cortical thickness controlled for age, sex, scan center and ICV.	Page 201
Table S32a: Full meta-analytic results for cortical thickness of each structure for the pediatric OCD patients compared with pediatric healthy controls, controlling for age, sex and scan center.	Page 204
Table S32b: Full meta-analytic results for cortical surface area of each structure for the pediatric OCD patients compared with pediatric healthy controls, controlling for age, sex, scan center and ICV.	Page 207
Table S33a: Full results from the moderator analyses in the adult samples of mean age and field strength of scanner on cortical thickness controlled for age, sex, and scan center.	Page 210
Table S33b: Full results from the moderator analyses in the adult samples of mean age and field strength of scanner on surface area controlled for age, sex, scan center, and ICV.	Page 213
Table S34a: Full results from the moderator analyses in the pediatric samples of mean age and field strength of scanner on cortical thickness controlled for age, gender, scan center and ICV.	Page 216
Table S34b: Full results from the moderator analyses in the pediatric samples of mean age and field strength of scanner on surface area controlled for age, sex, scan center, and ICV.	Page 219
Table S35: Demographic and Clinical Characteristics of medicated and unmedicated OCD patients.	Page 222
Table S36a: Full mega-analytic results for cortical thickness of each structure for the medicated OCD patients on antidepressants compared with adult healthy controls, controlling for age, sex and scan center.	Page 223
Table S36b: Full mega-analytic results for cortical thickness of each structure for the medicated OCD patients on antidepressants & antipsychotics compared with adult healthy controls, controlling for age, sex and scan center.	Pabe 226
Table S36c: Full mega-analytic results for cortical thickness of each structure for the medicated OCD patients on antidepressants versus those on antidepressants & antipsychotics, controlling for age, sex and scan center.	Page 229
Table S37a: Full mega-analytic results for cortical thickness of each structure for the age of onset squared regression analysis in adult OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 232
Table S37b: Full mega-analytic results for surface area of each structure for the age of onset squared regression analysis in adult OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 235
Table S38a: Full mega-analytic results for the cortical thickness of each structure for the age of onset squared regression analysis in pediatric OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 238
Table S38b: Full mega-analytic results for the surface area of each structure for the age of onset squared regression analysis in pediatric OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 241
Table S39a: Full mega-analytic results for the association between illness duration squared and the cortical thickness of each structure in adult OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 244
Table S39b: Full mega-analytic results for the association between illness duration squared and the surface area of each structure in adult OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 247
Table S40a: Full mega-analytic results for the association between illness squared duration and the cortical thickness of each structure in pediatric OCD patients, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 250
Table S40b: Full mega-analytic results for the association between illness duration squared and the surface area of each structure in pediatric OCD patients, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 253
Table S41a: Full mega-analytic results for the association between illness severity squared and the cortical thickness of each structure in adult OCD patients based on the	Page 256

YBOCS, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	
Table S41b: Full mega-analytic results for the association between illness severity squared and the surface area of each structure in adult OCD patients based on the YBOCS, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 259
Table S42a: Full mega-analytic results for the association between illness severity squared and the cortical thickness of each structure in pediatric OCD patients based on the CYBOCS, controlling for age, sex and scan center. Correlation coefficient Pearson's r is reported.	Page 262
Table S42b: Full mega-analytic results for the association between illness severity squared and the surface area of each structure in pediatric OCD patients based on the CYBOCS, controlling for age, sex, scan center and ICV. Correlation coefficient Pearson's r is reported.	Page 265

TABLE S1: ENIGMA Obsessive-Compulsive Disorder Working Group Demographics, age (in years), sex, and numbers breakdown for participating sites, separately for adult and pediatric samples.
