Table: Demographic predictors of accuracy of weight perception
(accurate; moderately inaccurate; grossly inaccurate) based on cumulative logit model (N=547)

Independent Variable	OR (95% CI)	Wald χ^2	P-value
Ethnicity/Race			
Non Latino White	1 (Reference)		
African American	.84 (0.57-1.24)	0.5	ns
Latino	.92 (0.60-1.41)	0.01	ns
Gender			
Male	1 (Reference)		
Female	2.08 (1.48-2.92)	18.01	0.001
Age	1.01 (.998-1.02)	2.65	0.103
Education			
Some college	1 (Reference)		
High school or less	.59 (0.401-0.861)	7.43	0.006
Diagnosis			
Depression and other diagnoses	1 (Reference)		
Schizophrenia; bipolar disorder	.67 (0.476-.944)	5.25	0.022

Abbreviations: CI, confidence interval; OR, odds ratio; All χ^2 tests use 1 degree of freedom
