

Example Main Choice Question (Male Patient)

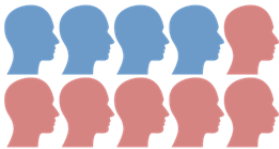

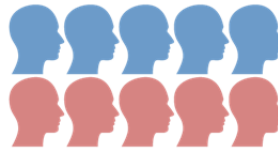

Remember: Pat is 40 years old and has been treated for schizophrenia for 20 years now. Pat currently lives with his sister and has a good relationship with his doctor. Pat has no other health problems.

Pat’s doctor could prescribe one of two possible medicines for him. The table below shows the results of each of these medicines **after one year**.

Pat on Medicine A after 1 year	Pat on Medicine B after 1 year	
No unusual beliefs, doesn't hear voices, trusts people Speaks rarely and slowly, rarely shows emotion No interest in social activities	Thinks people are stealing from them, often hears voices, doesn't trust people Speaks only when asked, shows no emotion Less interest in social activities (noticed by family or close friends)	
15-pound weight gain over the past year Muscle stiffness or shaking Problems getting & maintaining erections Normal blood sugar	30-pound weight gain over the past year No muscle problems No problems with erections Has high blood sugar that can lead to diabetes	
	Medicine A	Medicine B
Which medicine is better for Pat?	<input type="radio"/>	<input type="radio"/>

Example Additional Choice Question With Follow-Up

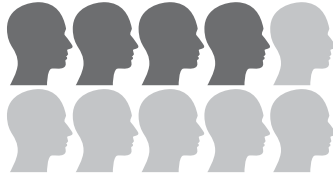

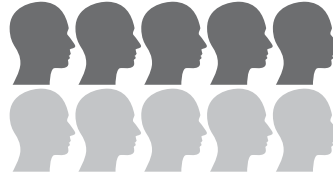

Thinking again about Pat, please answer the question below. The medicines are the same except as shown below. Pat typically never misses taking his medicine.

	Medicine A	Medicine B
How Pat takes the medicine	Pill once a day	Injection once every 3 months
Having unusual beliefs, hearing voices, and not trusting people	<p>Mild: 4 out of 10 (40%) Severe: 6 out of 10 (60%)</p> 	<p>Mild: 5 out of 10 (50%) Severe: 5 out of 10 (50%)</p> 

	Medicine A	Medicine B
Which medicine is better for Pat?	<input checked="" type="radio"/>	<input type="radio"/>

Now consider Jamie: Jamie is a patient like Pat who agrees with your choice above, but Jamie misses his pills **once or twice a week**.

	Medicine A	Medicine B
Which medicine is better for Jamie?	<input type="radio"/>	<input checked="" type="radio"/>

	Medicine A	Medicine B
How Pat takes the medicine	Pill once a day	Injection once every 3 months
Having unusual beliefs, hearing voices, and not trusting people	<p>Mild: 4 out of 10 (40%) Severe: 6 out of 10 (60%)</p> 	<p>Mild: 5 out of 10 (50%) Severe: 5 out of 10 (50%)</p>
