

Supplemental Figure 1. Rates of mental health diagnoses among veteran VHA primary care patients in fiscal year 2014 within weight categories

VHA: Veterans Health Administration; PTSD: post-traumatic stress disorder; Normal weight: $18.5 \text{ kg/m}^2 \leq \text{BMI} < 25 \text{ kg/m}^2$ Overweight: $25 \text{ kg/m}^2 \leq \text{BMI} < 30 \text{ kg/m}^2$; Obesity class 1: $30 \text{ kg/m}^2 \leq \text{BMI} < 35 \text{ kg/m}^2$; Obesity class 2: $35 \text{ kg/m}^2 \leq \text{BMI} < 40 \text{ kg/m}^2$; Obesity class 3: $40 \text{ kg/m}^2 \leq \text{BMI}$. Note: percents are *within* weight category percents. For example, 49.9% of women with normal weight had any mental health diagnosis, whereas 50.8% of women with overweight had any mental health diagnosis.
