Appendix Table 1. Comparing RAISE-ETP Sample with and without 12-, 15-, or 18-month Insurance Data					
	Main analytic sample (N=288)		Sample without 12-, 15-, or 18-month insurance data (N=113)		p-value for difference across samples
	N	Col %	N	Col %	
<u>Sociodemographic Characteristics</u>					
Age					0.040
15-17	17	6%	5	4%	
18-23	156	54%	76	67%	
24-25	35	12%	7	6%	
26-28	29	10%	15	13%	
29-32	32	11%	4	4%	
33 or above	19	7%	6	5%	
Gender					0.135
Male	215	75%	76	67%	
Female	73	25%	37	33%	
Race					0.274
Non-Hispanic White	133	46%	40	35%	
Non-Hispanic Black	93	32%	43	38%	
Hispanic/Latino	49	17%	24	21%	
Other	13	5%	6	5%	
Mother's education					0.375
Some college or higher	125	43%	41	36%	
Completed high school	76	26%	35	31%	
Some high school	38	13%	20	18%	
Some or completed grade school	50	17%	17	15%	
Whether a student or working					0.853
No	199	69%	77	68%	
Yes	89	31%	36	32%	

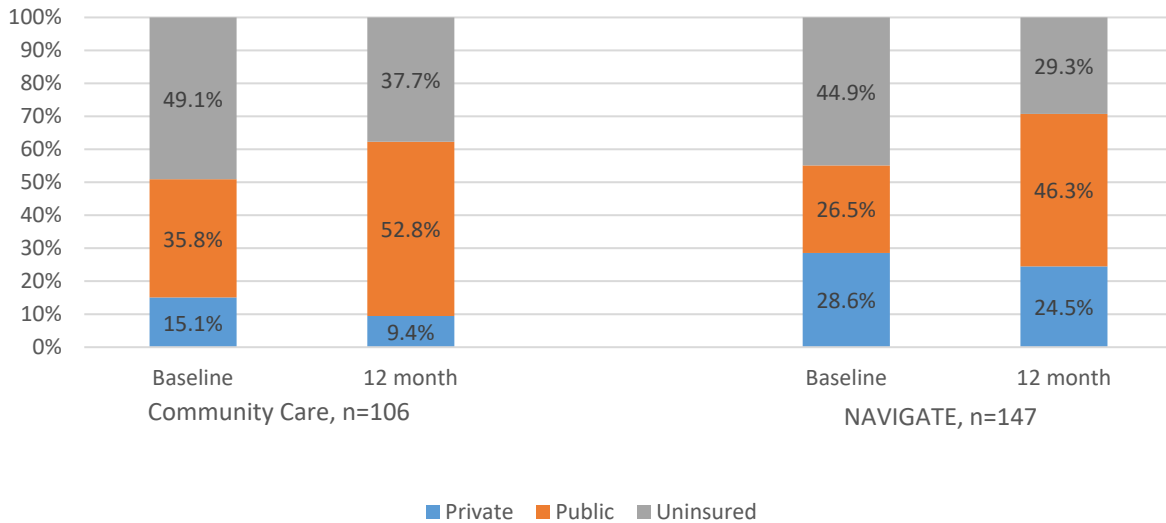

Disability at baseline					0.882
No	260	91%	102	91%	
Yes	27	9%	10	9%	
<u>Clinical Characteristics</u>					
DUP					0.317
DUP < 74	148	52%	52	46%	
DUP >= 74	139	48%	61	54%	
<u>PANSS: Mean (SD)</u>					
	76.05	(14.72)	78.13	15.86	0.214
<u>QLS: Mean (SD)</u>					
	53.14	(19.28)	51.42	17.28	0.410
<u>Experimental Group</u>					
Community Care	119	41%	62	55%	
NAVIGATE	169	59%	51	45%	

Note: The sample without 12-, 15-, or 18-month insurance data (N=113) excludes three RAISE-ETP observations that did not have a valid baseline insurance measure. Possible scores of the Positive and Negative Symptoms Scale (PANSS) range from 30 to 210, with higher scores indicating worse symptoms. Possible scores of the Quality of Life Scale (QLS) range from 0 to 126, with higher scores indicating better quality of life.

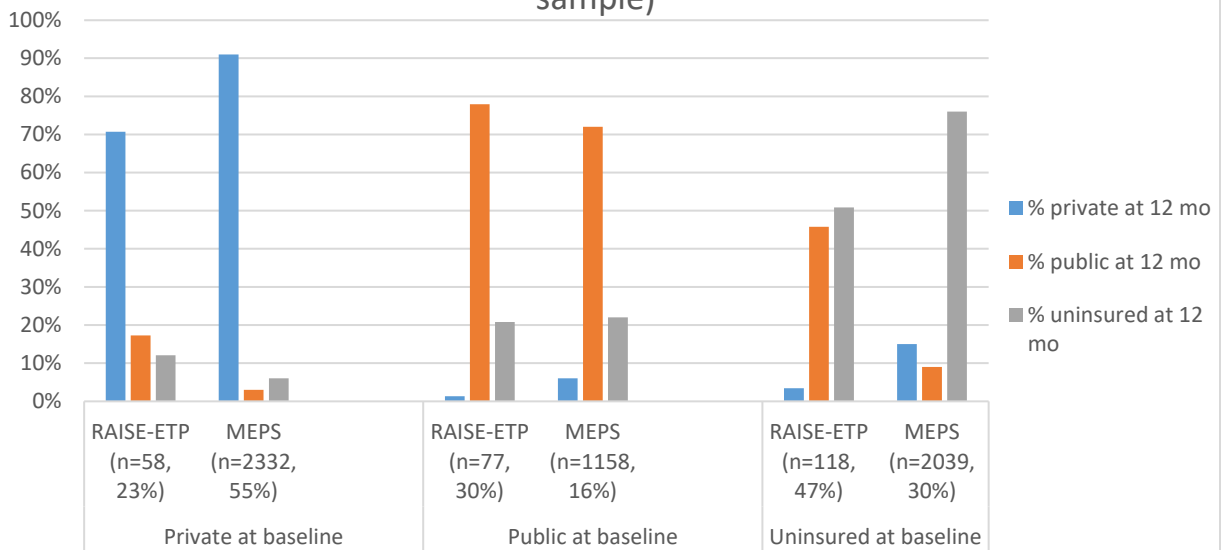

Appendix Table 2. Predictors of Uninsurance at any Point over the 12 Month Study Period Among those with Insurance at Baseline				
	Incremental Change in the Probability of Uninsurance	95% CI		P-Value
NAVIGATE group	-0.04	-0.17	0.09	0.551
Age at baseline				
15 to 17	0.01	-0.28	0.30	0.948
18 to 23 (ref.)				
24 to 25	0.33	0.08	0.58	0.010
26 to 28	0.09	-0.21	0.38	0.565
29 to 32	-0.16	-0.30	-0.03	0.013
33 and above				
Female	-0.03	-0.18	0.12	0.696
Male (ref.)				
Non-Hispanic Black	0.04	-0.11	0.18	0.634
Hispanic/Latino	0.13	-0.11	0.36	0.294
Other	0.28	-0.02	0.59	0.066
Non-Hispanic White (ref.)				
Mother's Education				
Some college or higher	-0.05	-0.23	0.13	0.570
Completed high school	0.16	-0.04	0.36	0.115
Some high school or grade school	-0.11	-0.32	0.10	0.321
No school or unknown (ref.)				
Whether a student or working	-0.13	-0.29	0.03	0.104
DUP	0.12	-0.01	0.25	0.077
PANSS	0.003	-0.003	0.01	0.327
QLS	-0.001	-0.01	0.004	0.623
Disability at baseline	-0.11	-0.29	0.07	0.244
N	153			
Pseudo R ²	0.235			
Notes: Data from the RAISE-ETP respondents with baseline and 12-month follow-up insurance status data (details in text). Incremental changes in the probability of baseline uninsurance and the associated confidence intervals and p-values were calculated from logistic regression estimates using the Margins command in Stata Version 15.				

Appendix Table 3. Predictors of Any Uninsurance at any Point over the 12 Month Study Period				
	Incremental Change in the Probability of Uninsurance	95% CI		P-Value
NAVIGATE group	-0.11	-0.22	-0.001	0.049
Age at baseline				
15 to 17	-0.01	-0.24	0.23	0.954
18 to 23 (ref.)				
24 to 25	0.29	0.15	0.44	<.001
26 to 28	0.30	0.15	0.45	<.001
29 to 32	0.04	-0.14	0.22	0.653
33 and above	0.03	-0.20	0.26	0.794
Female	0.06	-0.06	0.18	0.351
Male (ref.)				
Non-Hispanic Black	0.04	-0.09	0.16	0.572
Hispanic/Latino	0.24	0.10	0.38	<.001
Other	0.18	-0.06	0.41	0.138
Non-Hispanic White (ref.)				
Mother's Education
