Summary of Call Attempts

Summary of call attempts made to 2013 survey respondents who were thus eligible for the 2014 follow-up survey. Source: Field Research Corporation, San Francisco, CA.

Total listings available for the follow-up survey	**2,568**
Wrong number/disconnected/not a working number	362
Answering machine/busy signal	507
No answer	72
Respondent unavailable	39
Fax/modem/pager	10
Blocked number	12
Refusal	230
Partial complete/terminated during the interview	28
Other non-complete	23
Completed the follow-up survey	**1,285**

Sensitivity Analyses

Supplemental multivariable models exploring the use of a three category conceptualization of change in contact (odds-ratio estimates). Results (marginally significant opposite direction of associations between increased and decreased contact and symmetry in effect sizes) support our use of a continuous change in contact variable in the main results, given limited sample sizes in each change category that limit statistical power.

	Model 1		Model 2	
	OR	95% CI	OR	95% CI
English-preferring Asian	1.84	0.70-4.85	2.03	0.77-5.38
