The *Journal of Neuropsychiatry and Clinical Neurosciences* Announces New Article Types: **Submissions Welcome!**

JNCN has added several new article types to meet the needs of the field and stimulate commentary:

- **Treatment in Behavioral Neurology & Neuropsychiatry:** Using idealized clinical vignettes and high-level scholarship, these papers highlight issues in treatment that are frequently encountered but widely recognized as therapeutically, ethically, or administratively challenging.
- **Education in Behavioral Neurology & Neuropsychiatry:** Articles present, evaluate, and discuss educational methods, programs, and outcomes in neuropsychiatry education at the undergraduate medical, graduate medical, and/or postgraduate medical levels.
- **Analysis and Commentary:** Contributions present (a) focused analyses of and commentary on an article (or several related articles) on clinically important or controversial topics in neuropsychiatry that have been published recently in peer-reviewed clinical neuroscience journals (including, but not limited to, *JNCN*), with the aim of contextualizing, interpreting, or reconciling divergent findings, interpretations, and perspectives presented in those articles or (b) expert commentary on highly salient or controversial topics and articles in neuropsychiatry, where “expert” is defined by having published no fewer than five or more peer-reviewed articles that are directly relevant to the focus of the analysis and commentary.
- **Perspectives in Global Neuropsychiatry:** These articles offer insights into the practice of neuropsychiatry worldwide by describing the neuropsychiatric presentation, diagnosis, and treatment of a typical patient in a specific region or country and by highlighting the unique cultural, economic, political, and other issues that influence neuropsychiatric assessment and treatment in that country or region.
- **Icons in Neuropsychiatry:** This type of article offers historical or contemporary snapshots of neuropsychiatry’s practitioners or other images of interest (e.g., art, historic buildings, books, or monographs) to the journal’s readership and briefly describes their relevance to the field today.
- **Opinion:** These brief essays address important topics in neuropsychiatric practice, research, public health, health policy, health legislation, or ethics and generally are not commentaries on a specific article.
- **Introspections:** These works feature personal vignettes describing experiences in neuropsychiatric practice, research, education, and professional or community service that have been particularly important personally or professionally with the goal of informing the personal or professional development and experience of the Journal’s readers.
