Age at First Episode of Psychotic Symptoms: Surprising Findings

Many first-episode psychosis services are designed for people in their 20s. But of nearly 38,000 patients with first episodes served by five large health care systems, half were over age 30.

Patients' Online Access to Progress Notes Affects the Therapeutic Relationship

Veterans reported that trust in their clinician was either strengthened or strained by whether the notes showed respect. Transparency—or the extent to which notes reflected what happened in the session—also affected trust.
